Re: Dev (6, male)

From: Dr. Gregory House, HOUSE Clinic

Visit recommendation: routine specialist review.

Dear Colleague,

I am referring Dev for specialist assessment after review of submitted clinical information. The main reason for referral is a possible Rett syndrome or related condition requiring expert correlation.

Relevant accepted findings include Global developmental delay, Absent speech, Hypotonia, Microphakia, Gait imbalance.

Scorecard Differential

1. Rett syndrome (ORPHA:778)
2. Atypical Rett syndrome (ORPHA:3095)
3. Proximal Xq28 duplication syndrome (ORPHA:1762)
4. MECP2-related severe neonatal encephalopathy (ORPHA:209370)
5. X-linked intellectual disability-psychosis-macroorchidism syndrome (ORPHA:3077)
6. 1p36 deletion syndrome (ORPHA:1606)
7. Systemic lupus erythematosus (ORPHA:536)
8. Severe Canavan disease (ORPHA:314911)
9. Congenital muscular dystrophy, Fukuyama type (ORPHA:272)
10. Radioulnar synostosis-developmental delay-hypotonia syndrome (ORPHA:3270)

The available history and evidence were reviewed in a doctor-supervised workflow, and the detailed ranking output is being retained for clinical interpretation.

Please consider targeted examination, review of prior investigations, and appropriate confirmatory testing such as phenotype-directed genetic testing or metabolic/laboratory workup where clinically indicated.

I would be grateful for your assessment and recommendations regarding diagnosis, follow-up, and whether the patient requires urgent clinic review or routine specialist care.

Yours sincerely,

Dr. Gregory House
